Subject: Enterprise Pipeline Discharge summary 1 Feb
Date: Thursday, February 02, 2017 10:29:22 AM

On 1 February, recovery operations continued for the remaining free product on-site. Contaminated soil was pushed into piles and staged in preparation for disposal at the Alvarado disposal facility. Two Pletco clamps were installed on the ruptured pipeline during night operations. The EPA Team, Enterprise, and TRRC coordinated together for the Weather Contingency Plan and IAP requirements. On 1 February, approximately 1045 hours, a truck driving northbound on Highway 121 collided with a vehicle and injured two men. Both men were sent to the hospital for evaluation, and one had to be airlifted. Operations stopped temporarily and resumed after a safety meeting was held. START conducted documentation activities and air monitoring on-site and at the potential receptors. On-site VOC readings were below 13.5 ppm, and benzene readings were not detected. No Benzene or VOCs were detected at potential receptors.
